Education

Bachelor of Information Technology Engineering

École de technologie supérieure — Montreal, Canada

Expected Aug 2026

Sep 2022 – Present

– Software Security, Software Design, DevOps

- **Academic Exchange — Master in Information Security**

Universidad de los Andes — Bogota, Colombia

Jan 2025 – June 2025

– Cloud Security, Network Security, Security Architecture

University Diploma in Computer Technology

IUT Lyon 1 — France

Sep 2020 – June 2022

– Networks, Databases, Software and Web Development, Operating Systems

- **Academic Exchange — College Diploma in Computer Science**

Cégep de Matane — Canada

Jan 2022 – June 2022

– Securing Apache2 Web Servers, Cloud, Web Application Development

Skills

Security: Threat modeling (SABSA, NIST 800-30), OWASP Top 10/ASVS, OAuth2/JWT, SAST/DAST (SonarQube, OWASP ZAP, Burp Suite), CrowdStrike, Linux Hardening.

DevSecOps, IaC & Observability: Terraform, Kubernetes, Helm, Docker, Argo CD, Octopus Deploy, GitLab CI, Sumo Logic, Splunk, Bash.

Cloud & Network: Google Cloud Platform (IAM, Cloud Armor, GKE), Cloudflare, Azure & AWS concepts.

Languages & Frameworks: JavaScript/Node.js, Java, PHP, SQL, React, Vue.js, Puppeteer.

Methods & Quality: Code reviews, secure CI/CD, automation, technical documentation.

Soft Skills: Teamwork, problem-solving, leadership, stress management, self-learning, initiative taking.

Professional Experience

DevSecOps Engineer (Intern)

NOMADIS, Canada

Until May 2026

- Deployed the Trivy vulnerability scanner across 200 repositories directly into GitLab CI pipelines to protect against supply chain attacks.
- Migrated the Selenium Hub testing environment from GitLab runners to a Kubernetes cluster, significantly reducing CI compute minutes.
- Optimized QA storage by routing test artifacts to Google Cloud Storage (GCS) and developed a PowerShell script to automate precise video indexing.
- Migrated the monitoring system to Uptime Robot for approximately 80 URLs using Terraform (IaC) and configured automated Slack alerting.
- Maintained continuous GCP cloud infrastructure surveillance and investigated daily security alerts.

Web Server Security Consultant (Freelance)

Venezance, France

2025

- Secure client web infrastructure (Apache2 + Cloudflare): WAF implementation, TLS hardening, and malicious request filtering.
- Conduct targeted penetration tests (pentests) on applications and servers to identify and fix vulnerabilities.
- Reduce attack surface by closing unnecessary ports, strengthening firewalls, and structuring an IAM-style access management system (roles, rights, admin accounts).

API Integration Developer (Intern)

GoTo, Canada

May 2024 – Aug 2024

- Automate integrations via internal and external REST APIs, using OAuth2 and JWT tokens.
- Utilize Swagger for documentation and Splunk for analysis of massive request flows.
- Contribute to code reviews and fix a critical bug in integrations, adhering to company security and quality standards.
- Work autonomously on assigned tasks, with team support.

Web Developer / DevOps (Intern)

A-qui-s, France

Sep 2023 – Dec 2023

- Migrate internal applications to Docker containers to ensure portability and environment compatibility.
- Set up CI/CD pipelines and manage secrets via GitLab to ensure reliable and secure deployments.
- Improve an internal QA tool (SQL, PHP, Vue.js) by adding new graphs used weekly by the production team.
- Contribute to increasing software reliability and usability to guide team actions.

Web Developer (Intern)

Wibo.ca, Canada

Jan 2022 – June 2022

- Create a CMS (Content Management System).
- Responsible for the frontend (React, JavaScript).

Projects

SABSA Security Architecture for Fintech

2025

1. Enterprise security architecture — SABSA, NIST SP

800-30, COBIT, Risk Management

- Apply SABSA methodology to design a complete security architecture for a fintech with 2M users.
- Conduct IT risk analysis based on NIST SP 800-30r1 and identify priority threats.
- Define security policies, organizational models, and BPMN processes aligned with business objectives.
- Develop logical and physical layers: COBIT controls, access management, privilege schemas, security mechanisms, and network infrastructure.

SecureCloudApp

2025

2. Cloud-native web app — GCP, Docker, IAM, Cloud

Aarmor, Web Security Scanner

- Design, deploy, and configure a complete web application on Google Cloud Platform with a secure and scalable architecture.
- Implement IAM, firewall rules, and access control policies based on the principle of least privilege.
- Deploy backend microservices containerized with Docker and integrated with Cloud SQL and Cloud Storage.
- Apply protection strategies against attacks (Cloud Armor, encryption in transit and at rest, Web Security Scanner).

CTF Participation

2025

3. UnitedCTF 2025, HackFest CTF 2025 — Web Security,

Steganography, Binary Exploitation

- Participate in Capture The Flag competitions (UnitedCTF 2025, HackFest CTF 2025 in Quebec) focused mainly on web security.
- Solve web challenges (injections, XSS, auth bypass, misconfiguration) as well as steganography and binary exploitation tasks.
- Use specialized tools: Kali Linux, Burp Suite, CyberChef, custom scripts.
- Strengthen key skills: stress management, creative solutions, rapid analysis in a competitive context.

Volunteering

Scout Leader

France and Canada

2017 – 2024

- Lead and supervise groups of 25 young people aged 7 to 17.
- Organize a trip to Denmark: logistics planning, fundraising, transport, and budget management.
- Find solutions to unforeseen events and adapt quickly to changes.
- Make decisions under pressure and in stressful contexts.
